The present invention relates to an isolated and purified ApoptoM peptide. The invention is useful as a vaccine for the prevention and readement of pathological conditions from non-specific febrile illnesses to severe hemorrhagic manifestations, encephalitic syndromes and these pathological conditions are linked to Flavivirus infection or cancers. The invention is also useful in gene therapy. The present sequence is a p(95-114) EGFP (enhanced green fluorescent protein) (MI-M40) DEN (dengue) -2 (136F) plasmid DNA encoded protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated and purified ApoptoM peptide comprises 9 amino acids, useful as a vaccine for preventing or treating pathological conditions from nonspecific febrile illnesses to severe hemorrhagic manifestations or encephalitic syndromes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gene therapy, protein purification, virucide; cytostatic, vaccine, hemorrhage, bleeding, infection; flavivirus infection; neoplasm, cancer; DEN, dengue, mutant; mutein.

The invention is useful as a vaccine for the prevention and treatment of pathological conditions from non-specific febrile illnesses to severe hemorrhagic manifestations, encephalitic syndromes and these pathological conditions are linked to Flavivirus infection or cancers. The invention is also useful in gene therapy. The present sequence is a M1-40/DEN (dengue)-2 (F36) mutant protein.

New isolated and purified ApoptoM peptide comprises 9 amino acids, useful as a vaccine for preventing or treating pathological conditions from non-specific febrile illnesses to severe hemorrhagic manifestations or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated and purified ApoptoM peptide comprises 9 amino acids, useful as a vaccine for preventing or treating pathological conditions from nonspecific febrile illnesses to severe hemorrhagic manifestations or
                                                                                                                                                                                                           The present invention relates to an isolated and purified ApoptoM peptide. The invention is useful as a vaccine for the prevention and treatment of pathological conditions from non-specific febrile illnesses to severe hemorrhagic manifestations, encephalitic syndromes and these pathological conditions are linked to Flavivirus infection or cancers. The invention is also useful in gene therapy. The present sequence is a M20-40/DEN (dengue)-2 mutant protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to an isolated and purified ApoptoM peptide. The invention is useful as a vaccine for the prevention and treatment of pathological conditions from non-specific febrile illnesses to severe hemorrhagic manifestations, encephalitic syndromes and these pathological conditions are linked to Flavivirus infection or cancers. The invention is also useful in gene therapy. The present sequence is a M10-40/DEN (dengue)-2 mutant protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gene therapy, protein purification, virucide, cytostatic, vaccine, hemorrhage; bleeding, infection, flavivirus infection, neoplasm; cancer,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated and purified ApoptoM peptide comprises 9 amino acids, useful as a vacalne for preventing or treating pathological conditions from nonspecific febrile illnesses to severe hemorrhagic manifestations or encephalitic syndromes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  peptide. The invention is useful as a vaccine for the prevention and treatment of pathological conditions from non-specific febrile illnesses to severe hemorrhagic manifestations, encephalitic syndromes and these pathological conditions are linked to Flavivirus infection or cancers. The invention is also useful in gene therapy. The present sequence is a M32-40/DEN (dengue)-2 mutant protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gene therapy; protein purification; virucide; cytostatic; vaccine; hemorrhage; bleeding; infection; flavivirus infection; neoplasm; cancer;

The invention relates to pro-apoptotic fragments of the Dengue virus (DEN) pRM and E glycoproteins, methods for screening molecules capable of inducing apoptosis and methods of inducing apoptosis in a cell. The invention particularly relates to DEN-1 M (a membrane protein anchored in envelope surrounding the nucleocapabid of the virus) ectodomain sequence. Den-1-C amino acid sequence and DEN-2 M ectodomain sequence. Sequences of the invention are useful for inducing apoptosis in a cell of a patient suffering from cancer or flavivirus infection. They are also useful for screening molecules which inhibit apoptosis. The present sequence is DEN-2 virus M ectodomain. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gene therapy, protein purification, virucide, cytostatic, vaccine, hemorrhage, bleeding, infection, flavivirus infection, neoplasm, cancer, YF, yellow fever, mutant, mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel apoptosis inducing polypeptide fragments of Dengue virus-1 or 2 M protein, useful for inducing apoptosis in a cell of a human patient suffering from cancer or flavivirus infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to an isolated and purified ApoptoM peptide. The invention is useful as a vaccine for the prevention and treatment of pathological conditions from non-specific febrile illnesses pathological conditions, encophalitic syndromes and these pathological conditions are linked to Flavivirus infection or cancers. The invention is also useful in gene therapy. The present sequence is a M1-40/DEN (dengue)-2 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                  Gene therapy, protein purification; virucide, cytostatic, vaccine;

                                                                                                                                                                                                                                                                                                                  ö
                                                                New isolated and purified ApoptoM peptide comprises 9 amino acids, useful
                                                                           preventing or treating pathological conditions from non-
illnesses to severe hemorrhagic manifestations or
                                                                                                                               The present invention relates to an isolated and purified ApoptoM peptide. The invention is useful as a vaccine for the prevention and treatment of pathological conditions from non-specific febrile illnesses to severe hemorrhagic manifestations, encephalitic syndromes and these pathological conditions are linked to Plavivizus infection or cancers. The invention is also useful in gene therapy. The present sequence is a M1-40/YF (yellow fever).17D (T34, 136, 137, H39) mutant protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel apoptosis inducing polypeptide fragments of Dengue virus-1 or 2 M protein, useful for inducing apoptosis in a cell of a human patient

The invention relates to pro-apoptotic fragments of the Dengue virus (DEN) pRM and E glycoproteins, methods for screening molecules capable of inducing apoptoasis and methods of inducing apoptoasis in a cell. The invention particularly relates to DEN-1 M (a membrane protein anchored in envelope surrounding the nucleocapsid of the virus) ectodomain sequence, Den-1-C amino acid sequence and DEN-2 M ectodomain sequence. Sequences of the invention are useful for inducing apoptosis in a cell of a patient suffering from cancer or flavivirus infection. They are also useful for screening molecules which inhibit apoptosis. The present sequence is (95-114) EGFO6-245) DEN-2 fusion protein construct. This construct comprises 95-114 of the C-terminus of the C-protein of the DEN-1 virus strain BR/90 fused to the N-terminus of enhanced green fluorescent protein (EGFP) and DEN-2 virus strain Jamaica M ectodomain (DEN-2 polyprotein) fused to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel recombinant or synthetic polypeptide comprising an amino acid sequence that has at least about 90% sequence identity to any of the 20 fully defined amino acid sequences given in the specification. The polypeptide of the invention demonstrates virucide activity and may be useful for inducing an immune response to structide allowiruses (arboviruses group B), including Dempue viruses, as well as in detecting and/or diagnosing the presence of antibodies against the Dengue virus serotypes in a sample and for gene therapy.                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel recombinant or synthetic polypeptide comprising an amino acid sequence that has at least about 90% sequence identity to any of the 20 fully defined amino acid sequences given in the specification. The polypeptide of the invention demonstrates virucide activity and may be useful for inducing an immune response to Plaviviruses (arboviruses group B), including Dengue viruses, as well as in detecting and/or diagnosing the presence of antibodies against the Dengue virus serotypes in a sample and for gene therapy. The current sequence is that of a Dengue virus type 2 (DEN-2) C15/truncated prM amining fusion protein of the invention which comprises the C-terminal 15 amino acids of the capsid protein fused to a truncated form of the prM protein lacking the C-terminal 15 amino acids.

                             The invention relates to a novel recombinant or synthetic polypeptide comprising an amino acid sequence that has at least about 90% sequence identity to any of the 20° fully defined amino acid sequences given in the specification. The polypeptide of the invention demonstrates virucide activity and may be useful for inducing an immune response to Flaviviruses (arboviruses group B), including Dengue viruses, as well as in detecting and/or diagnosing the presence of antibodies against the Dengue virus serotypes in a sample and for gene therapy. The current sequence is that of a Dengue virus C15/truncated prM antigen fusion protein of the invention which comprises the C-terminal 15 amino acids of the capsid protein fused to a truncated form of the protein lacking
                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                       This protein represents a fusion protein comprising an M protein epitope from Dengue virus type 2 inserted into the P64K protein from Neisseria meningitidis. Synthetic peptides based on the Dengue virus epitope sequences (AAM75404-M75408) and fusion proteins can be used to raise antibodies. The peptides, protein and antibodies are all useful for diagnosis and treatment of Flavivirus infection, e.g. in vaccines. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                               New peptide(s) and fusion proteins useful for diagnosis and treatment of flavivirus infection - contain cross-reactive epitopes from Dengue virus pre-M/M protein and can induce neutralising antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel recombinant or synthetic polypeptide comprising an amino acid sequence that has at least about 90% sequence identity to any of the 20 fully defined amino acid sequences given in the specification. The polypeptide of the invention demonstrates virucide activity and may be useful for inducing an immune response to activity and may be useful for inducing an immune response to lavaviviness (arboviruses group B), including Dengue viruses, as well as in detecting and/or diagnosing the presence of antibodies against the Dengue virus serotypes in a sample and for gene therapy. The current sequence is that of the Dengue virus C1S/prM/E partially human codonoptimised antigen fusion protein of the invention which comprises 15 amino acids of the capsid (C) protein fused to the full-length partially codon-optimised prM protein and envelope (E) protein.
                                                                                                                                                                                                                                                            New recombinant or synthetic polypeptides and polynucleotides useful for diagnosing, preventing or treating diseases associated with flaviviruses, including dengue viruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New recombinant or synthetic polypeptides and polynucleotides useful for diagnosing, preventing or treating diseases associated with flaviviruses, including dengue viruses.

The invention relates to a novel recombinant or synthetic polypeptide comprising an amino acid sequence that has at least about 90% sequence identity to any of the 20 fully defined amino acid sequences given in the specification. The polypeptide of the invention demonstrates virucide activity and may be useful for inducing an immune response to Plaviviruses (arboviruses group B), including Dengue viruses, as well as in detecting and/or diagnosing the presence of antibodies against the Dengue virus serotypes in a sample and for gene therapy. The current sequence is that of the Dengue Virus C15/pm//B antigen Kusion protein of the invention which comprises 15 amino acids of the capaid (c) protein fused to the full-length prM protein and envelope (E) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel recombinant or synthetic polypeptide comprising an amino acid sequence that has at least about 90% sequence identity to any of the 20 fully defined amino acid sequences given in the specification. The polypeptide of the invention demonstrates virucide activity and may be useful for inducing an immune response to Plaviviruses (arboviruses group B), including Dengue viruses, as well as in detecting and/or diagnosing the presence of antibodies against the Dengue virus serotypes in a sample and for gene therapy. The current sequence is that of the Dengue Virus C15/Pm//S antigen fusion protein of the invention which comprises 15 amino acids of the capsid (C) protein fused to the full-length prM protein and envelope (E) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant or synthetic polypeptides and polynucleotides useful for diagnosing, preventing or treating diseases associated with flaviviruses, including dengue viruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  virucide; Flavivirus; arboviruses group B; gene therapy; C15/prM/E; prM;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel recombinant or synthetic polypeptide comprising an amino acid sequence that has at least about 90% sequence identity to any of the 20 fully defined amino acid sequences given in the specification. The polypeptide of the invention demonstrates virucide activity and may be useful for inducing an immune response to plaviviruses (arboviruses group B), including Dengue viruses, as well as in detecting and/or diagnosing the presence of antibodies against the Dengue virus serotypes in a sample and for gene therapy. The current sequence is that of the Dengue virus C15/prW/E partially human codonoptimised antigen fusion protein of the invention which comprises 15 amino acids of the capsid (C) protein fused to the full-length partially codonoptimised prM protein and envelope (E) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New recombinant or synthetic polypeptides and polynucleotides useful for diagnosing, preventing or treating diseases associated with flaviviruses, including dengue viruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Synthetic peptides based on the Dengue virus epitope sequences (AAM75404-W75408) and fusion proteins can be used to raise antibodies. The peptides, protein and antibodies are all useful for diagnosis and treatment of Flavivirus infection, e.g. in vaccines. (Updated on 25-WAR-2003 to correct P1 field.) (Updated on 17-OCT-2003 to
                                                                                                                                                                                                                                                                                                                                                                                     New peptide(s) and fusion proteins useful for diagnosis and treatment of flavivirus infection - contain cross-reactive epitopes from Dengue virus pre-M/M protein and can induce neutralising antibodies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel recombinant or synthetic polypeptide comprising an amino acid sequence that has at least about 90% sequence identity to any of the 20 fully defined amino acid sequences given in the specification. The polypeptide of the invention demonstrates virucide activity and may be useful for inducing an immune response to Plaviviruses (arboviruses group B), including Demogue viruses, as well as in detecting and/or diagnosing the presence of antibodies against the Dengue virus serotypes in a sample and for gene therapy. The current sequence is that of the Dengue virus c15/pm/F antigen fusion protein of the invention which comprises 15 amino acids of the capsid (c) protein fused to the full-length prM protein and envelope (E) protein.
                                                                                                                                                                                                                                                                                                                                                                                                         New recombinant or synthetic polypeptides and polynucleotides useful for diagnosing, preventing or treating diseases associated with flaviviruses, including dengue viruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       virucide; Flavivirus; arboviruses group B; gene therapy; DEN-2;

                                                                                                                       The invention relates to a novel recombinant or synthetic polypeptide comprising an amino acid sequence that has at least about 90% sequence identity to any of the 20 fully defined amino acid sequences given in the specification. The polypeptide of the invention demonstrates virucide activity and may be useful for inducing an immune response to Plaviviruses (arboviruses group B), including Dengue viruses, as well as in detecting and/or diagnosing the presence of antibodies against the Dengue virus serotypes in a sample and for gene therapy. The current antigen is that of the Dengue virus type 2 (DEN-2) Den-2CIS/prM/E antigen fusion protein of the invention which comprises 15 amino acids of the capsid (C) protein fused to the full-length prM protein and envelope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel recombinant or synthetic polypeptide comprising an amino acid sequence that has at least about 90% sequence identity to any of the 20 fully defined amino acid sequences given in the specification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     transcriptional unit encoding a signal sequence of a structural protein of a first flavivirus and an immunogenic flavivirus antigen of a second flavivirus, where the transcriptional unit directs the synthesis of the antigen. The polynucleotide of the invention has virucide activity, and acts as a vaccine. A composition of the invention is useful for immunising a subject against infection by a flavivirus. The polynucleotide is useful as a vaccine for preventing flavivirus infection. The sequence represents plasmid pCBD2-14-6, which contains
Dengue virus serotypes in a sample and for gene therapy. The current sequence is that of the Dengue virus CIS/prw/Le antigen fusion protein the invention which comprises 15 amino acids of the capsid (C) protein fused to the full-length prM protein and envelope (E) protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                             Novel isolated nucleic acid useful as vaccine for preventing flavivirus infection, comprises transcriptional unit encoding signal sequence of one flavivirus and immunogenic flavivirus antigen of a second flavivirus.
                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel nucleic acid comprising a transcriptional unit encoding a signal sequence of a structural protein of a first flavivirus and an immunogenic flavivirus antigen of a second flavivirus, where the transcriptional unit directs the synthesis of the antigen. The polynucleotide of the invention has virucide activity, and acts as a vaccine. A composition of the invention is useful for immunising a subject against infection by a flavivirus. The polynucleotide is useful as a vaccine for preventing flavivirus contains dengue-2 virus (DEN-2) prW, M and E, and Japanese encephalitis virus E proteins
                                                                                                                               Flavivirus; immunogenic flavivirus antigen; virucide; vaccine; prM-E; pCB8D2-2J-2-9-1; Japanese encephalitis virus; dengue-2 virus; DEN-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

```
Novel isolated nucleic acid useful as vaccine for preventing flavivirus infection, comprises transcriptional unit encoding signal sequence of one flavivirus and immunogenic flavivirus antigen of a second flavivirus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   contains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel nucleic acid comprising a transcriptional unit encoding a signal sequence of a structural protein of a first flavivirus and an immunogenic flavivirus antigen of a second flavivirus, where the transcriptional unit directs the synthesis of the antigen. The polynucleotide of the invention has virucide activity, and acts as a vaccine. A composition of the invention is useful for immunishing a subject against infection by a flavivirus. The polynucleotide is useful as a vaccine for preventing flavivirus infection. The sequence represents plasmid pCB9D2-IJ-4-3, which contains dengue-2 virus (DEN-2) prM, M and E, and Japanese encephalitis virus E
Flavivirus, immunogenic flavivirus antigen; virucide, vaccine, prM-E, pCB9D2-IJ-4-3; Japanese encephalitis virus; dengue-2 virus; DEN-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                               A polypeptide (AAW09409) comprises the capsid, pre-membrane, envelope and NS1 proteins of dengue virus serotype 2 (DEN-2) variant PR159/S1. A conservative mutation in the envelope protein may be involved in the attenuation of this small-plaque, temp. sensitive variant. Portions of the envelope protein, esp. domain B, can be expressed in eukaryotic hosts (see also AAW09410 and AAW09427-28) transfected with vectors incorporating DEN-2 S1 cDNA (see also AAT47666). These polypeptides can be used in novel subunit vaccines against viral infection, to raise antibodies useful for passive immunisation, and for diagnosis of infection. (Updated on 17-OCT-2003 to standardise OS field)

This sequence is composed of the capsid, prM, envelope (E) and NS1

C proteins of serotype 2 dengue virus DEN-2 strain PR159/S1. A vaccine for

protecting against flavivirus infection comprises a dimeric 80% E protein

C that has been secreted as a recombinant protein from a eukaryotic cell.

SOA E indicates a C-terminally truncated flavivirus E protein. The

Gimeric truncated E is formed: (1) by directly linking 2 tandem copies of

Gimeric truncated E is formed: (2) via the formation of a leucine zipper

CC dimeric truncated the homodimeric association of 2 leucine zipper

CC domain through the homodimeric association of 2 leucine zipper

CC domain through the homodimeric associated four-helix bundle domain formed

CC each fused to the C-terminus of an 80% E molecule; or (3) via the

C formation of a non-covalently associated four-helix bundle domain formed

CU upon association of two helix-turn-helix moleties attached to the C-

CC terminus of an 80% E molecule. Dimeric truncated DEN-2 E proteins are

CC terminus of an 80% E molecule. Dimeric truncated DEN-2 E proteins are

CC terminus of an 80% E molecule. Dimeric truncated DEN-2 E proteins are

CC terminus of an 80% E molecule. Dimeric truncated DEN-2 E proteins are

CC terminus of an 80% E molecule. Dimeric truncated DEN-2 E proteins are

CC terminus of an 80% E molecule. Dimeric truncated DEN-2 E proteins are

CC terminus of an 80% E comprises amino

CC acids 1-395 of DEN-2 E. The products can also be used for diagnosis of

infection. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Recombinant dimeric flaviviral envelope vaccine - comprising a dimeric 80% protein, useful for protecting against flavivirus, especially dengue virus infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Dengue virus; DEN-2; Envelope protein; 80% E; membrane protein; capsid protein; NS1 protein; Dengue haemorrhagic fever; DHF; Dengue shock syndrome; DSS; flavivirus; vaccine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a vaccine for protection against Flavivirus infection comprising a dimeric 80% envelope (E), which has been secreted as a recombinantly produced protein from Drosophila Schneider cells and which represents the N-terminal 80% portion of the protein from residue 1 cross included are a method for protecting a subject against a Flavivirus, an immunogenic polypeptide comprising a dimeric 80% E, an immunogenic composition for protection against Flavivirus infection composition for protection against Plavivirus infection comprising the immunogenic polypeptide and a carrier, an immunodiagnostic for detecting Plavivirus comprising the immunogenic polypeptide and a carrier, an immunodiagnostic for detecting Plavivirus in a test subject. The 80% E products are envelope proteins of serotypes comprising DEN-1, DEN-2, DEN-3 or DEN-4. The Flavivirus is a dengue virus. The 80% E products are envelope ricorporating a helix-turn-helix peptide, to encourage dimerisation. The incorporating a helix-turn-helix peptide, to encourage dimerisation. The incorporating a helix-turn-helix peptide, to encourage dimerisation. The bengue haemorrhagic fever, DHF, and Dengue shock syndrome, DSS). The present sequence is encoded by the partial genomic sequence of the DEN-2 are an envelope and represents the capsid, membrane, envelope and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                        Vaccine useful for protection against dengue virus infection, comprises a dimeric 80% envelope, which has been secreted as a recombinantly produced protein from Drosophila Schneider cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  virucide, vaccine, Flavivirus, dimeric 80%E, Drosophila Schneider cell; immunogenic composition, multivalent immunodiagnostic, dengue virus, viral capsid, prM gene; E gene; NS1 gene.

The invention describes a vaccine that generates a protective,

neutralising antibody response to a Flavivirus in a murine host. The

vaccine comprises a therapeutic amount of a dimeric 80%E, the dimeric
80%E having been secreted as a recombinantly produced protein from

Drosophila Schneider cells, and where 80%E represents the N-terminal 80%

portion of the protein from residues 1-395. Also described are: an

immunogenic polypeptide comprising the dimeric 80%E cited above, an

immunogenic composition that generates a protective, neutralising

antibody response to a Flavivirus in a murine host, comprising the above

immunogenic polypeptide and a physiological carrier; a multivalent

immunogenic for the detection of Flavivirus, comprising at least 2

of the above immunogenic polypeptides of at least 2 flaviviral serotypes;

of the above immunogenic polypeptides of at least 2 flavivirus in a test

subject, comprising the above immunogenic or multivalent immunodiagnostic

polypeptide, a suitable support phase coated with dimeric 80%E, and

copplypeptide, a suitable support phase coated with dimeric 80%E, and

The composition is useful for preventing or diagnosing infections caused

by dengue virus. This is the amino acid sequence of the polyprotein

connected by bengue virus gene viral capsid, prM, E and NSI genes for

denceded by virus strain PRIS9/SI used as the source of DEN-2 genes for the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Dengue virus
```

```
Detection and identification of Flaviviridae in biological sample - by amplifying consensus sequence then hybridisation opt. followed by typing. e.g. sequencing amplified prod.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The dengue 2 virus is an example of a member of the Flaviviridae which can be identified using the probe pair of the invention. A species-specific sequence can be amplified using the claimed oligonicleotides as primers in a PCR reaction (see AAQ12788 and AAQ12789). Other viruses which can be identified include Japanese encephalitis virus and yellow fever virus. All the dengue 2 virus proteins are encoded from an uninterrupted genomic sequence.                                                                                                                                                                                                                         The present invention relates to novel mutated flaviviruses comprising a phenotype in which the viral genome is modified by introduction of a mutation, singly or in combination, taken from mutations from recombinant virus bearing Vero adaptation mutations, putative Vero cell adaptation mutations, putative New occll adaptation mutations of dengue type 4 virus (DENA) or mutations known to attenuate dengue type 4 virus. The methods and compositions of the invention are useful for fine tuning the attenuation and growth characteristics of dengue virus vaccines for the prevention and/or treatment of dengue virus resent sequence is bengue virus type 4 strain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    genome polyprotein - dengue virus type 2 (strain PR159/S1)
N;Contains: capsid protein; envelope protein; membrane protein; nonstructural protein NS:
a; nonstructural protein NS4b; nonstructural protein NS5
C;Species: dengue virus type 2
C;Date: 30-Jun-1989 #sequence_revision 30-Jun-1989 #text_change 31-Dec-2004
C;Accession: A22972

genome polyprotein - dengue virus type 2 (strain 16681-PDK53)
N;Contains: capsid protein C; envelope protein E; membrane-associated protein M; nonstructural protein N844, nonstructural protein N85
C;Species: dengue virus type 2
C;Date: 31-Dec-1992 #sequence_revision 31-Dec-1992 #text_change 31-Dec-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         irology 187, 573-590, 1992
Title: Comparison of a dengue-2 virus and its candidate vaccine derivative: sequence r
Reference number: A42451; MVID:92188532; PMID:1312269
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 F;2492-3391/Product: nonstructural protein NS5 #status predicted <NS5>

N;Contains: envelope protein E; membrane-associated protein M; nonstructural protein NSI
C;Species: dengue virus type 1
C;Date: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 31-Dec-2004
C;Accession: J01405

N;Contains: capaid protein, envelope protein; membrane protein; nonstructural protein NS4

C;Species: dengue virus type 3

C;Species: dengue virus type 3

C;Accession: A34774

R;Osatomi, K; Sumiyoshi, H.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             genome polyprotein - dengue virus type 2 (atrain PUO-218) (fragment)
N;Contains: envelope protein E; membrane-associated protein M; nonstructural protein NS1
C;Specias: dengue virus type 2
C;Specias: dengue virus type 2
C;Accession: PS0043

phosphinothricin N-acetyltransferase (EC 2.3.1.-) - Streptomyces griseus
C;Species: Streptomyces griseus
C;Species: Streptomyces griseus
C;Species: O-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 09-Jul-2004
C;Accession: S49184
R;Marcos, A.T.; Diez, B.; Gutierrez, S.; Fernandez, F.J.; Oguiza, J.A.; Martin, J.F.
Bubmitted to the EMBL Data Library, June 1994
A;Description: Three genes hrdb, hrdb and hrdT of Streptomyces griseus IMRU 3570, encodi
A;Reference number: 849184
A;Accession: S49184
A;Status: preliminary
A;Accession: S49184
